

Anona Dutton is the Water Resource Planner for the Bay Area Water Supply and Conservation Agency (BAWSCA), which comprises the 27 utilities that purchase water from the San Francisco Public Utilities Commission (SFPUC) for resale within their local service areas. BAWSCA represents its members' collective interests in their relationship with the SFPUC on matters related to water supply, facility reliability, operations, water quality and wholesale water rates.

Anona works with Nicole Sandkulla, Senior Water Resources Engineer, in the areas of water resource planning and in the implementation of water use efficiency and water supply reliability plans. Anona is involved in the scoping, development, and implementation of a water supply plan for the BAWSCA service area. Anona is also involved in the implementation of the regional water conservation programs, including participation in regional grant funding opportunities, and examination of identified reclamation projects with a goal of increased implementation among BAWSCA member agencies.

Prior to joining BAWSCA, Anona was an Associate and a Director of Water Resources at Erler & Kalinowski, Inc. (EKI), a consulting engineering firm. While at EKI, Anona managed a variety of water resources projects, including the development of Water Conservation Plans, Water Supply Plans, and Urban Water Management Plans (UWMPs) for several BAWSCA member agencies. Through this work she developed a thorough understanding of the water resources and water conservation issues faced by BAWSCA member agencies. In addition, Anona worked for a variety of public and private clients to perform water demand estimates, prepare Water Supply Assessments pursuant to SB 610, develop sustainability and water conservation plans, prepare UWMPs and other water management documents, and to estimate the available volume and reliability of surface water and groundwater supplies, including well installation and testing and basin safe yield analysis. As part of these efforts, Anona represented her clients to regulatory agencies and the public.

Anona is a registered Professional Geologist and a Certified Hydrogeologist. She has a M.S. in Hydrogeology and B.S. in Environmental Science from Stanford University. She currently resides in San Bruno with her husband and daughter.
